(54) Title: **PLAYBACK DEVICE FOR INFORMATION DATA SETS**

(57) Abstract: A playback device for information data sets with a microphone, a memory arrangement, and a control unit. The audio markers are recorded with the microphone. The memory arrangement stores the audio markers in association with the respective information data sets. Furthermore, a control unit is coupled to the memory arrangement and to the microphone. In the method of operating the playback device for information data sets, the recognition of an information data set without an associated audio marker triggers the recording of an audio marker, and the newly recorded audio marker is stored in association with the relevant information data set.
